

Sacrificial Zinc anode

DESCRIPTION:

A sacrificial zinc anode is a type of metal used in cathodic protection systems to prevent corrosion of more valuable metal surfaces, such as those on ship hulls, pipelines, water heaters, jetty's & metallic structure in sea water etc.

APPLICATIONS:

- Marine structures (boats, ships, docks)
- Underground pipelines
- Water heaters and storage tanks
- Offshore oil platforms
- Jetty's

DIMENSIONS:

Length: 200 mm

Width: 50 mm

Thickness: 15 mm

Strip Size: 100 * 30 mm

TECHNICAL DATA:

Zinc purity	99.9 %
Complies with	ASTM B 418 Type II
zinc Weight	1 kg
Shape	Rectangular

SAFETY PRECAUTIONS:

Zinc is not highly toxic, but prolonged skin contact can cause irritation or allergic reactions in some people. Use safety gloves, goggles. In case of skin/ eye irritation wash with fresh water.
